Dear Mr. Herbold:

I recently discovered that SCVNGR had made a post on Sun Devil CareerLink seeking exceptional talent for their Jr. Software Developer position. Your company especially stood out for me because you utilize cutting-edge technologies and develop modern applications.

I am especially excited at the chance to work with a team of developers and learn more about Rails development. Although, I have not had any experience with Rails, I am a highly self-motivated individual who loves to explore and learn about the latest technologies. As such I have taken it upon myself to explore the world of NodeJS and MongoDB.

Discipline is an important part of your team's ability to drive application design. I have had the opportunity to experience the various disciplines, such as NodeJs' event loop and asynchronous flow control and Ruby on Rail's "Don't Repeat Yourself" and test-driven development principle. My

Working for a defense contractor has made me a much more security conscious developer. I believe that my security consciousness will ensure SCVNGR maintain a trustworthy reputation, especially with payment transactions.

I welcome the opportunity to speak with you further in order to discuss how my qualifications and experience will be an asset to SCVNGR. You can reach me at (480) 385-9857. I appreciate your time and consideration.

Sincerely,
Brian Trinh
